

AQUAKAT[®]

With the impulse of nature.

Take advantage of biostimulation with Penergetic for vitalized and structured water.

The AquaKat product series is used for the vitalization and structuring of drinking and process water. It brings the water particles to vibrate and stimulates a vortex movement. As with a spring, the water particles restructure themselves and regain the properties of natural and fresh spring water. This vitalization will bring you advantages in animal husbandry, plant cultivation and industry!

- ⊕ *Improved field spraying*
- ⊕ *Reduction Use of additives*
- ⊕ *Lower cleaning and effort costs*
- ⊕ *No impairment of the water pipes*
- ⊕ *Higher water consumption*

for water

...for intelligent agriculture

Installation

The AquaKat can be mounted on all pipe materials except lead. No intervention in the pipe network is necessary. A free pipe length of maximum 20 cm is required. External factors have an influence on the AquaKat. Please ask your local distributor for advice!

Application

Factors such as the maximum daily water consumption and the water pressure must be taken into account in the selection process for a suitable device.

Testimonials of Penergetic users

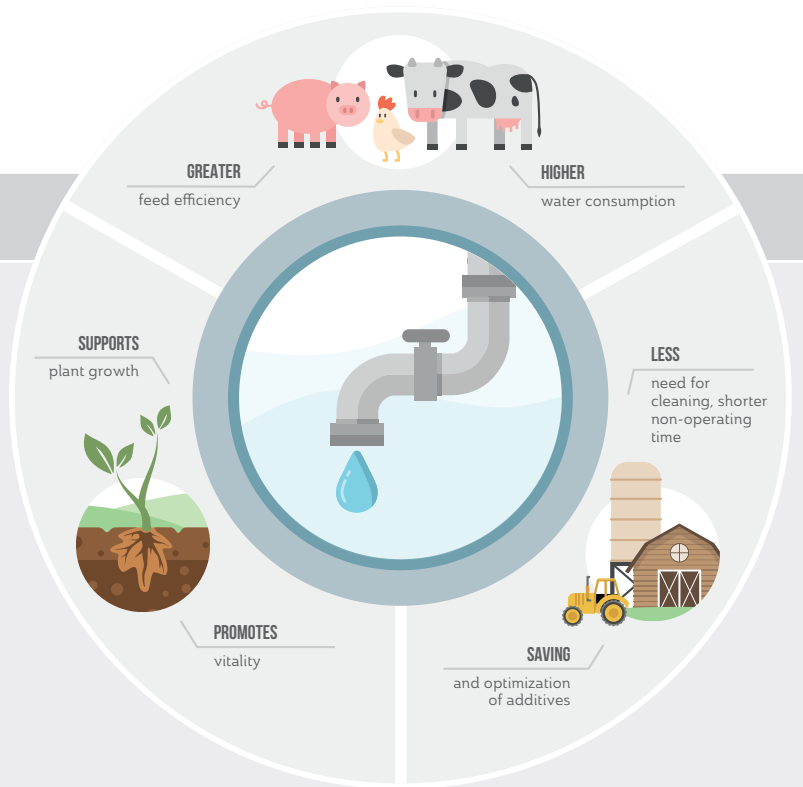

Sediments on water pipe

40 days after installation, sediments visibly decreased.

Pipes with AquaKat

Conductor condition after three months of operation without and with AquaKat.

Installation of AquaKat in dairy farm

More water consumption of the animals and an increased milk production.
