

Penergetic representatives visit Sri Lanka

penergetic
the natural biotechnology

Diesel & Motor Engineering PLC (DIMO), together with Penergetic International, has come forward to solve a variety of agricultural issues with a vision to think of future generations and to drive the smart agricultural revolution.

Nature demands that we treat her with care. We have become increasingly aware that overuse and aggressive treatments harm soils, plants and animals and disrupt their system. Around 5.6 billion hectares or 11% of the Earth's surface is used for agricultural purposes and 6 million hectares of agricultural land are lost to erosion, salinization, and desertification.

Penergetic International AG, developed a technology that stimulates biological systems through natural impulses and enables the optimization of cycles and the enhancement of individual processes. Penergetic supports an efficient yet gentle

approach to agriculture in which plants, animals and the environment are strengthened and can achieve their full potential.

Together with the international network of Penergetic partners, DIMO Agribusinesses promotes individual products and solutions for various customer segments.

With an objective to introduce Penergetic to the local tea industry Cedric Wilhelm and Birgit Wilhelm, two representatives from the Penergetic International team visited the Tea Research Institute, St. Coombs, Talawakelle recently.

Decisions were taken to carry out field trials with the help of the members of the TRI to solve several agricultural issues related to tea. Afterwards, both the representatives along with the members of the Sales & Marketing team of DIMO Agribusinesses visited a few of key dealers and Penergetic-applied farmer fields for a better insight of the local environmental conditions.
