Application on a lagoon in Washington

Lagoon size: 400'000 gallon. 300 cow free stall dairy.

Protocol used

- 72 lbs./33kg of penergetic g/k added to lagoon as shock treatment
- 6.5 lbs./3kg of penergetic g/k per week for 12 weeks
- Then 3.25 lbs./1.5kg of penergetic g/k per week = regular/maintenance application rate

December 23, 2013

Prior to treatment, there was a heavy crust on the lagoon surface.

January 3, 2014

11 days after treatment: The lagoon's liquid manure was bubbling, the previous crust submerged and dissolved already partially. There was no mechanical agitation involved.

January 8, 2014

16 days after treatment: Further improvement in lagoon quality is evident.
